

BayesB gains most where h^2 is high

$r = +0.640$ ($p = 0.006$), $\rho = +0.728$ ($p = 0.0009$)

GPFN falls below PCR as h^2 rises

$r = -0.402$ ($p = 0.109$), $\rho = -0.434$ ($p = 0.082$)
